

# Climate Impact Measurement

For start-ups and the organisations that support them

## Key Metrics

### Emissions Mitigation

Avoid the highest amount of GHG emissions along the supply chain

### Adaptation & Resilience

Strengthen the effectiveness of adapting to current and future climate risks

### Circularity

Design out waste and extend the product life as long as possible.

## Let Climate KIC measure the impact of your start-ups

Our extensive work with scaling climate start-ups has revealed a big gap in the market: Reliable impact data, backed by science.

Most accelerators lack the tools and expertise to measure and validate the impact of start-ups' solutions, which can hinder their growth and access to funding.

That's why we've developed a suite of services designed to meet your needs. Our impact services include:

- **Easy methodologies to measure, monitor and forecast each solution's impact**
- **(Pre)-assessments to identify solutions with high impact potential**
- **User-friendly data analytics to monitor your programme's impact**

- **Bespoke tools & training focused on climate impact measurement**
- **A 3rd-party validation report for start-ups to back up their claims**
- **Post-sales technical support (up to 6 months)**

## Success Story: Climate KIC x Amazon

For four years, Climate KIC and Amazon have partnered to deliver the Amazon Sustainability Accelerator, a programme designed to support late-stage European start-ups in driving environmental innovation.

Since launching in 2022, the Accelerator has expanded from a focus on sustainable consumer products to encompass four key verticals: sustainable packaging, circular economy, recycling technology, and energy in buildings.

## Why invest in impact measurement?

### Attract the highest quality cohorts

Use our (pre-)assessments to identify the solutions with high impact potential.

### Differentiate your programme

Implement bespoke tools & trainings focused on mitigation, adaptation & resilience and circularity .

### Leverage portfolio-level data

Tap into user-friendly data analytics to monitor your programme's impact. Great for raising funding and building credibility.
