eit Climate-KIC

Urban Transitions Workshop IV

Hotel Ilunion | Málaga, Spain | 12–14 September 2018

Day One: Partners as drivers of system change

When	What
14:00–15:00	Registration and networking lunch
15:00–19:00	*Theory of Change to Theory of Practice* Systems Thinking – Celebrate successes and share lessons learned – Building our collective knowledge of the community Invited speakers: • Indy Johar, Dark Matter Labs on future instruments for cities • Francesca Bria, CIO, Barcelona on new data for cities (tbc)
20:00	Informal networking dinner at AC Hotel Malaga Palacio

Day Two: Accelerating learning – your role in designing bold experiments

When	What
08:00–09:00	Networking breakfast

09:00-16:00	*Accelerating learning – your role in designing bold experiments* Engagements with invited cities to explore their urban challenges, discuss potential opportunities/solutions, and explore ways to leverage our resources to attract additional funding to scale-up our impact. • Invited: Amsterdam, Barcelona, Berlin, Bologna, Copenhagen, Castellón, Edinburgh, Helsinki, London, Lyon, Madrid, Málaga, Malmö, Milan, Modena, Oslo, Paris, Reykjavik, Seville, Valencia, Vejle, Zurich
16:00-18:00	Closing drinks reception

Optional Day 3 Sessions: Collective intelligence in action – Your expertise at work on real world urban challenges

Please indicate which sessions you intend to attend when signing up!

When	What
09:00-14:00	Málaga Mobility Workshop hosted by Jaime Briales Guerrero, Jefe de Servicio de Innovación, Energía y Nuevas Tecnologías, Ayuntamiento de Málaga
09:00-14:00	**Collective Intelligence Sessions aligned to EIT Climate-KIC CITIES Programme** Share and grow your knowledge of how cities can most effectively drive transformative change in the following parallel sessions hosted by the Smart Sustainable Districts (SSD) Programme team: • **Community Participation** *Citizen Power, Co-creation, Equity:* these are powerful concepts that need to be put into practice to make cities and districts more inclusive and sustainable. The big question is how to do that best? In this collaborative session, we would like to invite city officers, researchers, and practitioners to discuss, share and gather collective

wisdom on how to accelerate the next generation of citizen engagement and participation approaches in cities

- **Enabling Smarter Cities**

  Everyone aspires to introduce smart cities. However, city communities continue to face fundamental questions such as: what really is a smart city, how do we get one, and will it actually help us? This session will focus on the two key themes we see as key to cities efficiently adopting and deploying digitalisation solutions to drive more sustainable cities.

  1. How can cities establish the social systems that will ensure that data and smart city systems can be managed effectively as a 21st century commons?

  2. What data interoperability standards are needed to unlock innovations from universal access to securely managed data?

- **Capital Platforms**

  Transformative work in cities will create opportunities for, and will require, massive financial investments - touching hard and soft infrastructure, enterprises, buildings and distributed technology applications. Part of the transformation process entails defining the service models that are inclusive, adaptive, and tailored to specific local imperatives. Join this session that explores the essential role of effective capital platforms for financing these service models.

- **Evaluation Frameworks**

  City communities need to capture their vision for change in locally-relevant indicators that are useful for measuring their progress. Join this session to help strengthen the approach we have consolidated for helping city communities co-develop a dedicated indicator framework of aims, targets and indicators suited for their strategy and projects.

- **Capacity Development for Cities**

  This session is an invitation to partners to collaborate in the design and implementation of Climate-KIC's overarching capacity development programme for cities. We will present the capacity

	development programme structure for cities that we have been developing in 2018, and through this session we aim to identify relevant partners, who would be interested in joining our community's efforts to grow and deliver this work.
