

Malta

Round one:

-> original challenge: how can we simplify the waste management process?

-> reframed challenge: how can we use waste as a resource? Intermediate aim: zero waste to landfill

Long term aim: circular island, net zero waste

Outcome of round 2:

Lots of interesting ideas and lots of barriers to get there. Ideas floating around, but need further refinement:

- leadership required, pushing the agenda and inspiring people with behaviour change campaign.
- Resource management roadmap - circular city system map to show interdependencies and showcase financial incentives.
- decentralised waste management (e.g. in house) to take the burden Off the central system, coupled with consolidation of waste management contractors
- merging of 68 municipalities to create common agendas?
- net zero waste construction sites
